

FNP Sales Dashboard – Detailed Insights Report

Executive Summary

This dashboard analyzes 1,000 customer orders with total revenue of ₹35,20,984, an average customer spend of ₹3,520.98, and an average delivery time of 5.53 days. It highlights sales by occasion, category, city, month, product, and order hour, helping management understand demand patterns and improve business decisions.

Key Insights

1. Revenue is strongest during Anniversary, Raksha Bandhan and Holi, while Diwali and Valentine's Day generate comparatively lower revenue.
2. Colors is the highest revenue-generating product category, followed by Soft Toys and Sweets. Mugs and Plants contribute the least, suggesting opportunities for product improvement or promotion.
3. Imphal, Dhanbad and Kavali record the highest order volumes among the top cities, indicating strong regional demand.
4. Monthly revenue peaks in February and August, reflecting seasonal and festival-driven purchasing behavior. April-July show weaker sales.
5. Magnum Set is the best-performing product by revenue, followed by Quia Gift and Dolores Gift.
6. Revenue increases during evening hours (approximately 6 PM–9 PM), indicating that customers place higher-value orders later in the day.
7. Average delivery time of 5.53 days indicates stable logistics performance but can still be improved for better customer satisfaction.

Business Recommendations

- Increase marketing campaigns before Anniversary, Holi and Raksha Bandhan.
- Promote low-performing categories using bundles and discounts.
- Maintain higher inventory for top-selling products during peak months.
- Expand operations in high-performing cities and analyze reasons for lower-performing regions.
- Schedule advertisements and promotional notifications during evening hours when revenue is highest.
- Reduce delivery time below 5 days through logistics optimization.

Conclusion

The FNP Sales Dashboard provides a comprehensive overview of sales performance and customer purchasing behavior. The analysis shows that revenue is highly influenced by festivals, occasions, product mix, seasonal demand, and purchasing time. By focusing on high-performing occasions, strengthening weaker product categories, optimizing inventory for peak months, targeting high-demand cities, and improving delivery efficiency, the business can increase revenue, improve customer satisfaction, and achieve sustainable growth. The dashboard serves as an effective decision-support tool for management by converting sales data into actionable business insights.
